ABSTRACT

In this paper ,we study asymptotic properties of solutions of the following third – order differential equations with - P Laplacian

$$[|u''(t)|^{p-1}u''(t)]' + f(t, u(t), u'(t), u''(t)) = 0 \quad ; p \geq 1 \quad (1)$$

In the sequel,it is assumed that all solutions of the equation(1) are continuously extendable throughout the entire real axis.

We shall prove sufficient conditions under which all global solutions are asymptotic to $at^2 + bt + c$; as $t \rightarrow \infty$ where a,b,c are real numbers.

Key words: Differential equations, Asymptotic behavior, p-Laplacian, Bihari's inequality.
