Abstract

The researchers, in their different specialization, and who are concerning of wateriness, economy, environment, social, educational and political affairs, all of them, are considering the Arab water security is one of the most strategically, vital and important subject due to the great necessity of water in Arab world. Because it is limited and rare in addition to the extending of population density in Arab countries which increase water using either for industry and agriculture use or for house consumption.

This research is dealing with water in Arab world through study of natural and unnatural resources according to statistical data we have. And it studies, in brief, the water matter scientifically, showing the environment, economic, social and political characteristics, The study also deal with the main problem of dividing the Nile and Al-phorate water and their shared-cost countries also the basic water matter in the Middle-East in addition to the targets of water projects in both economic and political sides.

The Study discovers the dangerous role of Israel and Turkey to govern the resources of Arab water and to apply it to economic sales to be evaluated according to price theory. The study mentions also to International Bank role, which is completing Israel and Turkey and their effects on Arab Water Security.

Finally the study presents specific suggestions and recommends aiming to active the Arab supporting and cooperation in water affairs and to establish right principles to maintain the Arab Water Security, protect this great, vital wealth from losing and stealing .
