Autoimmune Liver Diseases

أمراض الكبد المناعية الذاتية

Causes for liver diseases

Virus infection

Hepatitis A, B, C, D, E
CMV, EBV, etc.

Bacterial Infection

Brucella, Leptospiren

Parasite infection

Malaria, Amoebae

Autoimmune

Autoimmune hepatitis (AIH)
Primary Biliary Cirrhosis (PBC)
Primary Sclerosing Cholangitis (PSC)

Genetic

Morbus Wilson
Hämochromatose
 α 1-antitrypsin deficiency

Toxic

Alcohol
Drugs

Nonalcoholic fatty liver disease

Obesity
One or more abnormal cholesterol levels
Diabetes mellitus

Others

z.B. Budd-Chiari syndrome

Autoimmune Liver Diseases

1. Autoimmune hepatitis (AIH) التهاب الكبد المناعي الذاتي
2. Primary biliary cirrhosis (PBC) تليف الكبد الصفراوي الأولي
3. Autoimmune cholangitis (AIC) الامراض المناعية للأقنية الصفراوية

Autoimmune Liver Diseases

1. Autoimmune hepatitis (AIH) is a chronic inflammation of the liver caused by the immune system.
2. AIH is a serious disease and leads to liver cirrhosis without treatment
3. AIH is classified as either type I ,II or III

Autoimmune Hepatitis

AIH	Type 1	Type 2
Age at onset (mean)	10 years	6.5 years
Onset at <20 yrs of age (%)	40	80
Preponderance (F/M)	7/1	9/1

F.Alvarez, Montreal

Diagnostic criteria for AIH

1. No alcohol abuse
2. or recent use of hepatotoxic drugs
3. No markers of current infection with hepatitis A, B and C viruses
4. Autoantibodies (ANA, SMA, LKM1, LC1, SLA)
5. Predominant serum aminotransferase abnormality

The presence of autoantibodies is prerequisite for the diagnosis of AIH

Autoantibodies in Chronic Hepatitis

AIH Type I

- Most common form of AIH
- HLA-DR3 in younger patients
- HLA-DR4 in older patients
- Detection of ASMA (Anti Smooth Muscle Antibodies) and ANA (Antinuclear Antibodies)

AIH Type II

1. Predominance in female children
2. Anti-LKM-1 positive (CYP2D6)
3. Anti-LC-1 positive
Formiminotransferase cyclodeaminase
4. More aggressive disease progression
5. More therapeutic relapses الانتكاسات

AIH (Type III)

- Anti-SLA positive Diagnosis

1. IIF is not helpful مفيد
2. ELISA and/or immunoblot for detection of Anti-SLA essential Anti-Liver/Pancreas Antigen, tRNP^{(Ser)Sec}
3. In a few cases of AIH Anti-SLA may be the only autoantibody present
4. Previously classified such cases as non-A-non-B hepatitis

Autoimmune Hepatitis

Diagnostic Criteria of Autoimmune Hepatitis

Requisites	Definite	Probable
No genetic liver disease	Normal α_1 antitrypsin phenotype Normal serum ceruloplasmin, Iron and ferritin levels	Partial α_1 antitrypsin deficiency Nonspecific serum copper, ceruloplasmin, Iron, and/or ferritin abnormalities
No active viral infection	No markers of current infection with hepatitis A, B, and C viruses	No markers of current infection with hepatitis A, B, and C viruses
No toxic or alcohol injury	Daily alcohol < 25 g/d and no recent use of hepatotoxic drugs	Daily alcohol < 50 g/d and no recent use of hepatotoxic drugs
Laboratory features	Predominant serum aminotransferase abnormality Globulin, γ -globulin or immunoglobulin G level ≥ 1.5 times normal	Predominant serum aminotransferase abnormality Hypergammaglobulinemia of any degree
Autoantibodies	ANA, SMA, or anti-LKM1 $\geq 1:80$ in adults and $\geq 1:120$ in children ; no AMA	ANA, SMA, or anti-LKM1 $\geq 1:40$ in adults or other autoantibodies*
Histologic findings	Interface hepatitis No biliary lesions, granulomas, or prominent changes suggestive of another disease	Interface hepatitis No biliary lesions, granulomas, or prominent changes suggestive of another disease

Abbreviation : AMA, antimitochondrial antibodies

* Includes perinuclear anti-neutrophil antibodies, SLA, Actin, LC1 and gp210 (asialoglycoprotein receptor)

Based on recommendations of the International Autoimmune Hepatitis Group (J Hepatol 1999 ; 31 :929-938)

Autoimmune Liver Diseases

- In 1999 the International Hepatitis Group published a scoring system for the diagnosis of autoimmune hepatitis (AIH). AIH **could be differentiated from chronic hepatitis C** with a sensitivity of 97 - 100 % and a specificity of 66 - 92 %.

Czaja et al., Hepatology 2002, 36:479-497

Immunosuppression

Virus replication increased

AIH improved

Interferon alpha

Antiviral

AIH worsening

Autoimmune Liver Diseases

• Primary Biliary Cirrhosis

• الابتدائية صفراوية

- Progressive destruction of the small bile ducts
- Prevalence 25 : 100.000
- Female preponderance (F:M 9:1)
- Association to other autoimmune diseases
- **Ursodeoxycholic** acid therapy
- Immunosuppressive therapy questionable مشكوك فيه

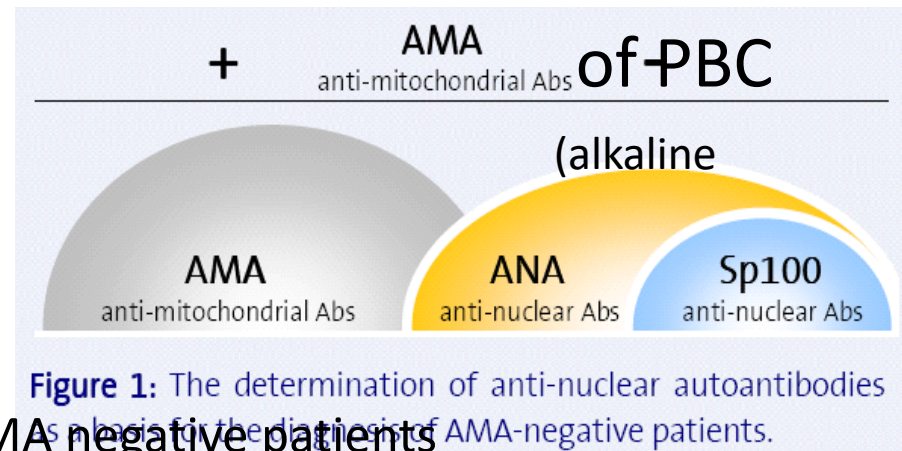

Autoimmune Liver Diseases

Laboratory Diagnosis

- elevated liver parameters (alkaline phosphatase, AST, ALT)
- **AMA**-M2 positive in 95 % (Pyruvat-Dehydrogenase Complex)
- Anti-**Sp100** present in 35 - 50 % of **AMA** negative patients
- Additional markers of minor importance: **gp210**, **Anti-Lamin B Receptor (LBR)**

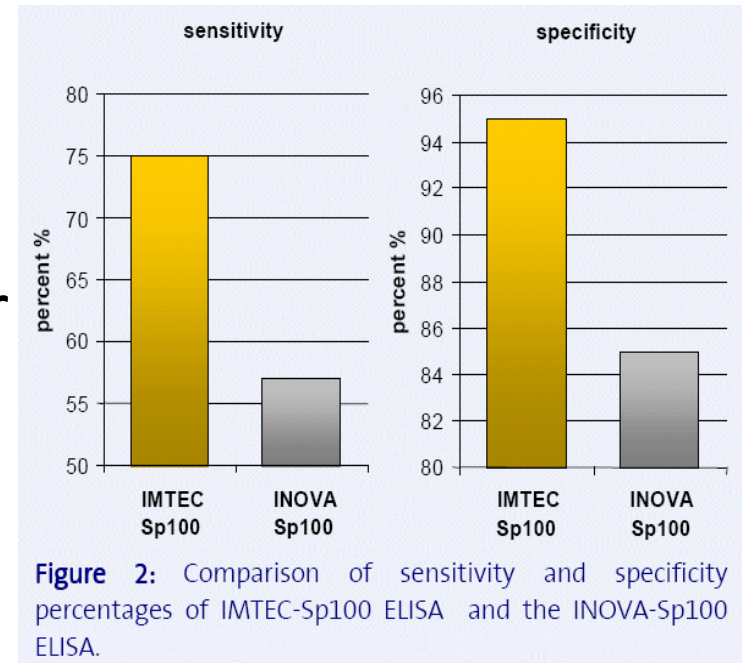

Autoimmune Liver Diseases

Sp100-Antibodies

- Higher Sensitivity and Specificity for **PBC** compared to IFA (HEp2; multiple nuclear dots)
- Correlation to unfavourable course of disease
- Sensitivity of 31% for PBC

Autoimmune Liver Diseases

• Sp100 Antibodies

ITC66040

Conclusions. Both methods were highly specific. Sensitivity of ELISA method was slightly better than this of IIF. IIF had lower predictive values for PBC than ELISA. IIF require significant experience in interpreting subjective pattern, but remains an effective assay. ELISA produce a clear quantitative and qualitative results.

Autoimmune Liver Diseases

- Primary Sclerosing Cholangitis

- تصلب الأقنية الصفراوية لابتدائي

- Inflammation of small bile ducts

- High association with inflammatory bowel diseases

- Laboratory tests include

- **Peri**nuclear Antineutrophil Antibodies (pANCA)
(70 %)

- **Urso**deoxycholic acid therapy questionable

- Immunosuppressive therapy questionable

Autoimmune Liver Diseases

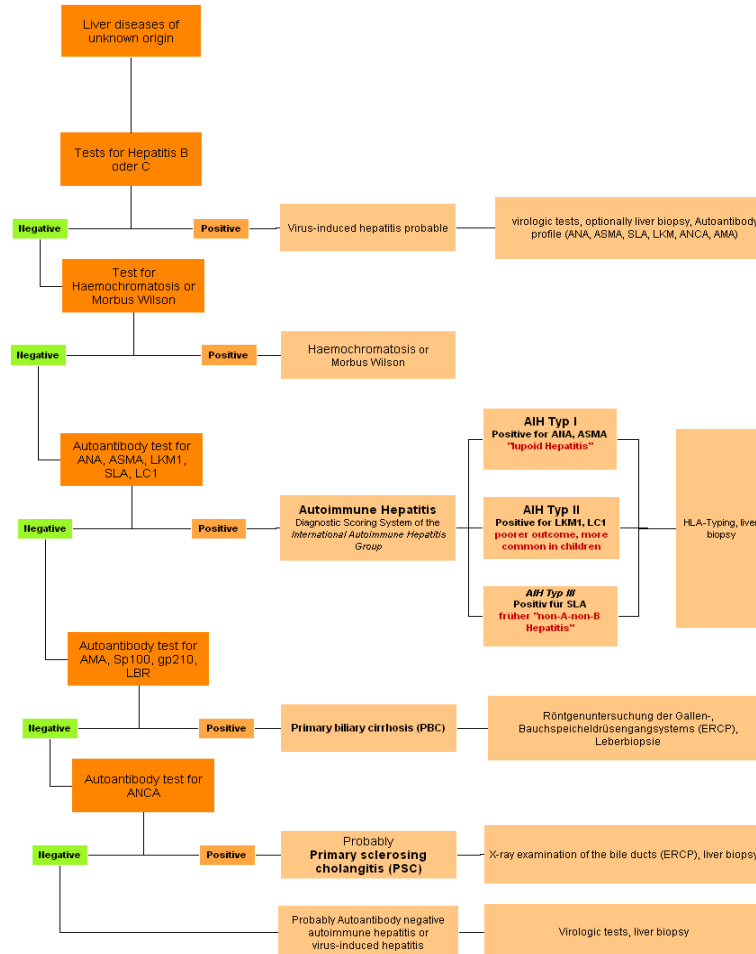

- Autoantibodies in
- Autoimmune
- Liver Diseases

	PBC	PSC	AIH Type 1	AIH Type 2	AIH Type 3
ANA Antinuclear Antibodies	(+)	(+)	+	(+)	(+)
ASMA Anti-smooth muscle Ab			+		
LKM1-Antibodies Cytochrome P450 2D6				+	
LC1-Antibodies liver cytosolic antigen				+	
SLA-Antibodies soluble liver antigen					+
ASGPR-Antikörper Asialoglycoprotein-Receptor			+	+	+
AMA-M2 Antimitochondrial Antibodies	+				
Sp100-Antibodies "nuclear dots"	+				
gp210-Antibodies Glycoprotein 210 kD	+				
LBR-Antibodies Lamin B-Receptor	+				
ANCA Antineutrophil Antibodies		+			

Autoimmune Liver Diseases

- Diagnostic
- Algorithm
- for
- Autoimmune
- Liver
- Diseases

ANA - Antinuclear antibodies, ANCA - Antineutrophil Antibodies;
 AMA - Antimitochondrial Antibodies, ASMA - Anti-smooth muscle Antibodies
 ERCP - Endoscopic retrograde cholangiopancreatography
 gp210 - Glycoprotein 210 kD, LC1 - liver cytosolic antigen, LKM1 - Cytochrom P450 2D6,
 SLA - soluble liver antigen, Sp100 - 95-100 kD protein "nuclear dots"
