Abstract

Urban environment is changing constantly with many different challenging requirements accompanied with increasing urban development. This led to urgent need to control these challenges and their negative effects in order to keep the quality of life in healthy and suitable environment. Thus, land use, transports' requirements, infrastructure services, and socio economic and environmental issues are all together comparable. However, those subjects overlap negatively or positively; moreover, they contribute in the living environment quality, urban environment balance and sustainable development.

This research study illustrates the sustainable urban living space design throughout situating guidelines and strategies for future sustainable urban development, to facilitate sustainable appropriate living space and urban services in suitable urban environment. Therefore, authorise sustainable urban development strategies under the umbrella of the entire planning guidelines.
