Abstract

Many of studies try to analyze the relation between human and environment which divided to physical environment and intellectual environment. Both of them represented the tow environments -Natural and Cultural-. two environments in this thesis were not limitation but it's a potential power.

This affective role on the urban designers will create a positive relation between public-private concept and the structure of the urban space. But this relation required being, because the being is structured and that meaning of the single situation consists in its relationship to the general structures.

Architectural space is a system of interacting fields generated by centers which gather the external and internal forces. When fields interact, zones of varying density and dynamism are created, which allow the complex life to take place. There are always more insides inside and more outsides outside. This tow environments in this thesis represented the Influence of outside on inside.
