Cancer Patient Association CPA (charity association)

After graduating from the faculty of medicine in Damascus ,Syria ,I began training in an Internal medicine department in ALMOUSSAT Hospital where, I spent 3 years in different wards of cardiology ,gastro-enterology and hematology. I then had 2 years training in the main medical oncology center in Syria (nuclear medical center).

In 2000, I went to France ,Lyon ,where I had more training in hematology , I got special training in performing procedures such as ,bone marrow aspiration, bone marrow biopsies ,intrathecal injections . I also worked in sterile sectors with patients getting bone marrow transplantation, or being given high dose chemotherapy for malignant hemopathies .I got very good training in the cytology of hemopathies as well.

I got back to Syria in 2004 ,where I work as professor of hematology in the faculty of medicine, and as hematologist in the department of Hematology ,ALMOUSSAT Hospital.

.I also have a private clinic dealing with benign and malignant hemopathies and other solid tumors.
